Subject: RI-FS Erata

Laura/Carol

I have identified several errata for the June 2006 RI-FS as listed below:

Section 4

Figure A1.160 Dissolved Selenium UHSU Groundwater Areal Extent – the map is missing data that represents the > MCL and <= 100 MCL category (orange dots).

Figure A1.161 Total Selenium UHSU Groundwater Areal Extent – the map is missing data that represents the > MCL and <= 100 MCL category (orange dots).

Section 5

Figure A1.134 Ammonia (as N) Concentrations in Surface Water – the map is missing the two (2) data points (SW097 and W+I) that should be shown on the figure.

In all three cases the databases used to generate the maps have been revised to incorporate the changes that will allow these samples to be posted if Luke runs the maps again.

Richard
